

GREEN POOL FIX

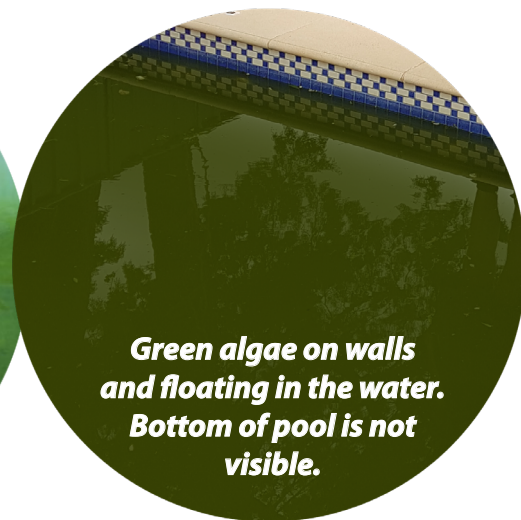

HOW GREEN IS GREEN?

Green algae on walls but no floating algae in the water (prior to brushing).

Green algae on walls and floating in the water. Bottom of pool is still visible.

Green algae on walls and floating in the water. Bottom of pool is not visible.

1 ADJUST pH

Adjust pH to 6.8 - 7.2. This improves the effectiveness of chlorine in treating algae. You will need to balance the pool again after the algae treatment.

2 BRUSH

Brush the pool walls and floor (even if you cannot see them) to free the algae into the water. This enables the algae to be treated. Repeat daily until pool water has cleared.

3 CIRCULATE

Ensure the pool jets are pointing down 45°. This stirs up the water and enables the pool chemicals to circulate thoroughly and destroy the algae. Run pump and filter continuously for as long as possible (ideally 24hrs).

4 TREAT

Based on 45,000 - 50,000L pool. See APPLICATION CALCULATION overleaf.

CHLORINE

2 X applications of **BioGuard Burn Out® Extreme**.

ALGAECIDE

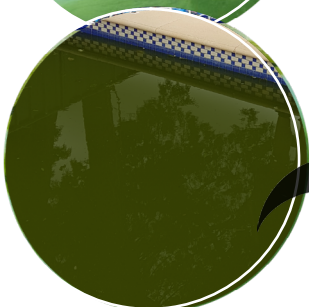

'Algae Infestation' dosage rate.
For every 10,000L, add 100mL of **BioGuard MSA Extreme™**

For every 10,000L, add 120g of **BioGuard Power Chlor®** every hour, until noticeable change in water colour (max 4 doses per day).

'Heavy Growth' dosage rate.
For every 10,000L, add 150mL of **BioGuard MSA Extreme**.

For every 10,000L, add 120g of **BioGuard Power Chlor** every hour, until noticeable change in water colour (max 8 doses per day).

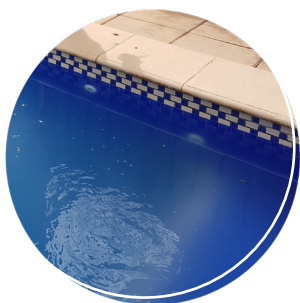

'Heavy Growth' dosage rate.
For every 50,000L, add 1L of **BioGuard Algi Destroyer™**.

GREEN POOL FIX

5 CLARIFY

Based on 45,000 - 50000L pool. See APPLICATION CALCULATION below.
Continue to run pump and filter until the pool water clears.
Always monitor filter pressure and backwash when necessary.

CLARIFY STEP 1

Once the water has reached cloudy blue and is starting to clear, add 1 X bottle of **BioGuard Pool Tonic™**

CLARIFY STEP 2

To speed clarification (if required) dose with **BioGuard Quick Clear™** as needed, as per dosage rates on product label.

CLARIFY STEP 3

For further clarification, dose pool with **BioGuard Water Sparkle™** or **BioGuard Power Floc™ Maxi**, as per dosage rates on product labels. Manual vacuum to waste will be required for these treatments.

NOTE: Fill the pool's water line to above the skimmer box after performing 'Clarify Step 3', as water will be lost as you vacuum to waste. If water is not freely available floccing is not recommended.

6 RE-BALANCE

Once the pool is clear, complete a water test and balance the water.

Chlorine levels and pH should be tested daily by use of a reliable test kit using fresh testing reagents. Stabiliser levels **MUST** be tested fortnightly by your local BioGuard Approved Retailer or by use of a reliable test kit.

7 TREATMENT COMPLETE!

Time to enjoy your healthy, sparkling clear pool!

BioGuard's 3 Step Program is a simple and effective routine to keep your pool healthy, sparkling, and clear all year round. For more information visit www.bioguard.com.au

* APPLICATION CALCULATION

Use the formula below to calculate application dosages.

FORMULA	$\frac{\text{Pool Volume}}{10,000\text{L}} \times \text{Dosage rate} = \text{Dosage amount per application}$	
EXAMPLE BioGuard Power Chlor	$\frac{50,000\text{L}}{10,000\text{L}} \times 120\text{g} = 600\text{g dosage rate per application}$	

****Check with your local BioGuard Approved Retailer prior to treatment to ensure it is suitable for your pool****
